INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; Box No. V citations and explanations supporting such statement

1	Statement

Novelty (N)	Claims Claims	<u>1-13</u>	YES NO
Inventive step (IS)	Claims Claims	1-13	YES NO
Industrial applicability (IA)	Claims Claims	1-13	YES NO

2. Citations and explanations (Rule 70.7)

Documents cited in the International Search Report:

D1. US 5892754 A

D2. Terraplay: "Introduction to the Terraplay system", version 2.0, 12th of June 2001.

commonly used methods for flow control optimized for specific applications. The invention according to the present application aims to solve this problem.

D1, which is considered to represent the most relevant state of the art, discloses a system for adaptive flow control (see abstract). The flow control is adapted to the current state of the network. Further, the flow control is optimized for the applications in the network. The network software in the system (which corresponds to the generic algorithm in the application) monitors a number of parameters in the network. reported parameters are of these values (that correspond to the applications specific applications control means in the present application) (see column 2, line 48-52). The applications adapt their function (for example the type of coding) based on the values of these parameters.

The applications in D1 notify the network software about desired values on certain parameters (see column 3, line 34-38). These parameters are used for defining a desired quality of service (see column 3, line 5-7). The latency is one of the parameters that are used for controlling the quality of service (see column 5, line 22-28).

D2 is a background art document.

. . . / . . .

Supplemental Box

In case the space in any of the preceding boxes is not sufficient. Continuation of: Box V

The invention differs from D1 in that the generic control means is implemented in the receiver terminal. In D1 the network software, which correspond to the generic control means, is implemented in the network. It is not considered obvious to the skilled person to modify the system in D1 so that it includes a generic control means in the receiver terminal. Furthermore, in the cited documents there are no suggestions leading a person skilled in the art to include this feature in the system described in D1. Consequently, the invention according to claims 1-13 is novel and involves an inventive step. The invention is considered to be industrially applicable.
